FLOORTEC TERRASSEN-RAND

Powerful decking cleaning with a high performant cleaning device

You have taken the right decision to buy the FG TERRASSEN - RANDY. Your new decking edger is powerful, ergonomic and has a low weight, therefor it allows a work without fatigue also on big surfaces. It cleans up the edges after having cleaned the surface with the FG TERRASSEN - BLITZ. The optional connection to a vacuum cleaner allows working with a reduced level of dust protection, most important, because the dust of many tropical woods traditionnally used for decking often is canceregenous.

Technical dates

Tension / Frequency: 230 V / 50-60 Hz

7,2 A brush Nominal current:

Nominal power absorption: 1750 W

Service mode: S1 (Permanent duty)

Protection class:

900 - 3500 1/min Speed Brush:

Ø Brush: 80 - 120 mm

Brush largeness: 100 mm Weight: 3,7 kg

Delivery

- 1 TERRASSEN-RANDY incl. 1 cleaning
- Power lead
- Special key SW 24
- Angular key SK 5
- Operation instruction

General description

The **FG** TERRASSEN-RANDY has been developed especially for the cleaning of wooden deckings. Those deckings get grey and dirty after a short time. Getting wet, the are slippery and dangerous. The innovative cleaning brush of the **FG** TERRASSEN-RANDY after the cleaning of the surface takes away the dirt and the grey layer and gives back to the wood the natural beauty also in the edges. If required, the surface can be treated with decking oil immediately.

Read this operating manual carefully before starting work!

Safety advices

Using the FG TERRASSEN-RANDY national prescriptions for the protection against electrical hazards, injuries and inflammations are to be observed!

1. Keep your working place in order! Disorder increases the risque of incidents!

2. Take work area into consideration.

Do not expose the TERRASSEN-RANDY to rain. Do not use the TERRASSEN-RANDY in dampy or wet surroundings. Ensure good lighting conditions. Do not use the TERRASSEN-RANDY in the vicinity of flammable liquids or gases.

3. Keep other people, especially childs away from work area.

Provide, that children do not touch the machine and the elcetrical lead.

4. Protect yourself against electric shock

Avoid physical contact with earthed objects, for example pipes, radiators, ovens, refrigerators. For additional protection we recommend the use of a personal protector plug.

5. Do not overcharge your TERRASSEN-RANDY! You work more successful and safely in the indicated charge range.

6. Wear a dust mask

Wear a dust mask at least of class P2 when carrying out tasks that create a lot of dust e.g. when emptying the dust bag. The dust of tropical woods are dangerously canceregenous, allergenic and irritating.

7. Wear appropriated clothes!

Do not wear th wide clothes and use solid shoes.

8. Ear protector

It is highly recommended that you wear an ear protector (special accessory) when sanding, due to the high level of noise during sanding operation 85 dB(A).

9. Employ the TERRASSEN-RANDY only for the intended use.

10. Disconnect mains plug

When assembling or dismantling the machine, when it is not in use, or when carrying out maintenance work e.g. changing the brush drum, you must disconnect the TERRASSEN- RANDY from the mains.

11. Covers

The machine shall not be used without the appropriate covers. Do not touch rotating elements.

12. Do not leave any tools in the machine Before switching the machine on check that all spanners and adjusting tools have been removed.

13. Always be alert

Keep the machine constantly under your observation while you work. Act sensibly. Do not operate the machine if you are unable to concentrate.

14. Examine your machine for signs of damage

Before starting work allways check carefully that all component parts are in perfect condition to serve their intended purpose. Check that all moving parts are in good working order, that they do not stick and are not damaged. All components must be assem - bled correctly and meet all requirements in order to guarantee perfect operation of the machine.

15. Prevent fire hazard

Always empty the dust bin on finishing work and before leaving the work area. Depose the dust in a safe place.

16. Reparation should be executed only by an authorized repair service.

19. Electrical safety

The TERRASSEN-RANDY is a device of the protection class 1, that means, that only leads and plugs with an earth conductor may be used. Reparation and replacement of plugs only by a qualified repair service.

20. Lead

Only use leads with a sufficient section. The minimal section of the cable is 1,5 mm².

Warning!

For your own safety only use equipment and special accessories specified in the operating manual. The use of tools or accessories other than those recommended in the operating manual could mean a risk of personal injury.

Operating manual

Use of the machine

The **TERRASSEN-RANDY** is delivered assembled and ready for use. Before starting, connect machine to the electric supply. Take care, that the voltage corresponds to the required voltage indicated on the type shield.

Before switching on the machine

Make sure, that the brush does not touch the floor!

Injury hazard! Never switch on the machine without the covers!

The working largeness of the TERRASSEN-RANDY is 100 mm, the max. brush diameter is 120 mm. The axle and the brush drum have double key slots. This allows highest running precision and the lowest possible vibration level.

Mounting / Dismounting of the lead

The alimentation lead is to be connected with the special clutch: Insert the clutch in the female part on the machine and turn it slightly to get it locked. To dismount it, turn it in the opposite sens to release it.

Speed control (Fig. 1)

The device is equipped with a continuos speed control at the grip, that allows the speed variation from 960 to 3500 rpm. B - C + D are the ideal speed range, that gives clean and shade-free surfaces. In the case of particular dirty surfaces, the speed can be risen. Please note, that a higher speed level conditions more brush consumption and the risk of burning the wood.

- Hard and tropical woods max. level D
- Pinewoods max. level G

Dust suction

At the brush cover you find a conical tube Ø 37mm for the connection to a vacuum cleaner in order to permit a low level of dust production while sanding.

Danger of fire hazard!

Dust tends to auto-inflammation. Always empty the bin and stock the dust in a fire proof place!

Replacement brush drum (Fig. 2)

Only use the FG special brush drum, that allows you

cleaning and smoothening in one step. Fibres are cut off and edges are rounded, so you get a perfect surface also for barefoot walking on it.

To attach the brush, remove the clamping screw, remove the worn brush, place the new brush on the spindle and reattach the clamping screw. To lock, press the black locking button.

Adjusting the angle of the extraction hood with handle (Fig. 3)

Use the SK 5 angle socket wrench to loosen the screw on the holder and adjust the angle of the extraction hood with handle. Tighten the screw again after adjustment.

Coal brush replacement (Fig. 4)

- Switch off the machine and unplug it
- Loosen the screws (Pos. 149) and remove the service cover.
- Disconnect braid, remove coal brush clean coal holders
- Insert Original-FG-coal brushes (they may not stick in the coal holder)
- Re-insert pression springs
- Replace cover and tighten screws

The air conduction slots allow on observation of the coal brush fire. In the case of an important fire, switch off immediately the machine and review it.

Cleaning

The deposal of dust in the interior of the machine can be avoided by blowing it out with compressed air.

Maintenance - Gear drive

The gear grease must be renewed after ca. 1.500 service hours!

Trouble shooting

If against all probability, faults should appear, here is how to find and eliminate them:

Fault	Possible reason	Reparation	
Motor does not start	No current	Check alimentation	
	Used coal brushes	Replace coal brushes (see ill.)	
Weak dust suction	Suction pipe is blocked	Clean pipe	

In the case, that the indicated repairing proposals should not resolve the problem, please contact our service office:

Tel.: (Mo – Fr 7⁰⁰ to 17⁰⁰ Uhr): **03594 / 7792600** or e-Mail: **info@fg-online.net**

Operation

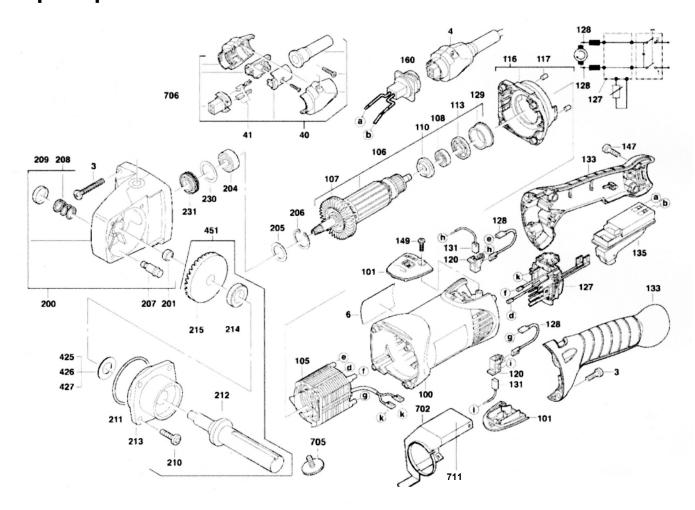

Instruction of use

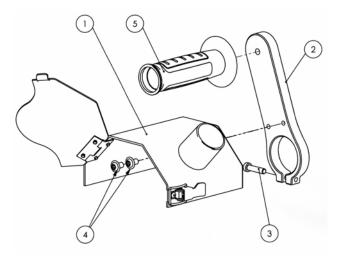

Pass the device with moderate pression ahead and back on the surface. With every passage, you should move the machine sidewards from the left to the right side. The so achieved oscillation effect gives a homogenuous surface without level differences. A too high speed level and brushing too long on one place can cause heat production and burned spots. Moose and other plants should be removed before starting work.
